

# Waterlogic 4 Firewall™

The Waterlogic 4 dispenser uses Firewall™ UV light to wipe out impurities. It's in an innovative piece of technology which has been designed by us to produce the purest water. It purifies drinking water, cleansing the water to 99.9999% bacteria free, and acts as a barrier, maintaining hygiene of the dispenser. Our unique design also results in high capacity to provide hot, cold, ambient, or sparkling water, whenever you want it.

The Waterlogic Firewall guarantees a microbiologically pure, fresh and clean glass of water for every user throughout the day.

## Three Steps to Greatness

Your Waterlogic dispenser has 3 core technologies which mean that what you get out of your machine is much better than what goes in:

**1. Filtration:** our filtration technology is really good at taking the bad stuff out and leaving the good stuff in. This stage removes chlorine and other water-borne tastes and odors.\*

**2. Firewall™:** next the Firewall UV purification will wipe out impurities, cleansing pathogens from the water by up to 99.9999%. As an added layer of protection, the UV light keeps the dispensing nozzle from becoming contaminated.

**3. BioCote®:** we've got the inside covered and the outside too. As another layer of defense, BioCote keeps the dispensing area free from bacteria.
